# Message from the Founder Of K-PAK Group

Since our inception in 1986, our focus has always been to serve the food industry with top of the line packaging solutions.

What started as a small operation with a humble monthly turnover of KWD 20,000, has grown into the regionally acclaimed K-PAK Group yielding seven digits figures in monthly sales.

This continued success is the direct result of the hard teamwork of our multi-cultural professional workforce. The commitment and dedication to K-PAK Group's ethos is across all our employees status; from Labors, Drivers, Operators and Engineers leading to Top Management.

As a team, we are consistently striving to develop and deliver high quality products, to introduce new packages and services to meet the ever growing market and customers' needs and to remain market competitive at all times.

Most importantly, we understand and appreciate the importance of time. To ensure that our customers are served within the minimum lead time, we have invested in ten production & storage locations across the Gulf countries.

With all the appreciation towards our team, we remain ever so grateful to all our customers who have entrusted us, throughout the years, with their business.

Together we were able to grow K-PAK into the success story it is today focusing on continuous improvement. Forever committed to being your most reliable partner.

**Your Preferred Packaging partners.**

**Abdulaziz Fahad O. Al-Serri**  
**Founder**  
**Group Vice Chairman & CEO**

# K-PAK at a Glance

In 1986, K-PAK started its operations in Kuwait and was the first in the Middle East to lay the foundation of disposable tableware manufacturing introducing petroleum derivative (polystyrene) manufacturing.

In 2000, K-PAK expanded its operations as it saw a growing regional market need and launched its second production facility in Dammam, KSA under the brand name S-PAK.

In 2003, to cater to the increasing demand in new markets from the Levant and Europe, K-PAK launched its third production facility in Jeddah, at the Saudi port city.

In 2007, K-PAK saw a great opportunity in adding a fourth production facility, U-PAK Industries, in Ras Al Khaimah, UAE as this would give them a logistical lead.

Today, with 10 different production and storage facilities across the GCC, nearly 250 employees and state of the art machineries, K-PAK Group leads the industry both in innovation and size, being the largest manufacturer in the Gulf & Middle East.

K-PAK offers the largest range of disposable products in take away food, grab on the go containers, tableware, trays and cups. Serving the food industry in retail, catering, supermarkets, hypermarkets, bakeries and fast food.

Recently, K-PAK launched lighter and super absorbent trays, branded as "Vampirella", this new packing suffices the requirement of meat & poultry processing industry. The absorbent ratio of 5 to 8 times of the trays weight, of liquids emanation from fresh/frozen cuts, relieved the concern of "Shelf-presentation" and improved "Shelf life".

K-PAK expansion in Rigid Plastics (PET, PP & HIPS) complements its growing portfolio of food packaging.

And as part of our extended customer service, K-PAK offers customized, branded boxes and cups' product range.

K-PAK Group has direct presence in Kuwait, KSA and UAE markets, while being represented by trusted and experienced distributors in other Middle Eastern countries.

All our products are tested in independent

laboratories and K-PAK is the sole food disposable packing manufacturer in the Middle East to be strictly following European Commission Regulation (EU) No.10/2011. The group is ISO certified and the first to achieve Green certification in the region.

As the company thrived in the business industry, the demand for K-PAK group products has increased exponentially. K-PAK launched a trading company in 2019 in Dubai named K-Concept. K-Concept was established to cater to all of the extended customer requirements that have been requested by our esteemed customers.

The group has staked in the project heavily to make sure that our customers get all possible packaging solution from around the world under one roof. The new project will focus on offering a larger range of retail disposable products to serve the food industry ingeniously in high-end catering, restaurants and hotels.

The success of this new operation occurred as a result of the main objective of the company which is to meet every demand of our customers possible and affordable.

## Vision

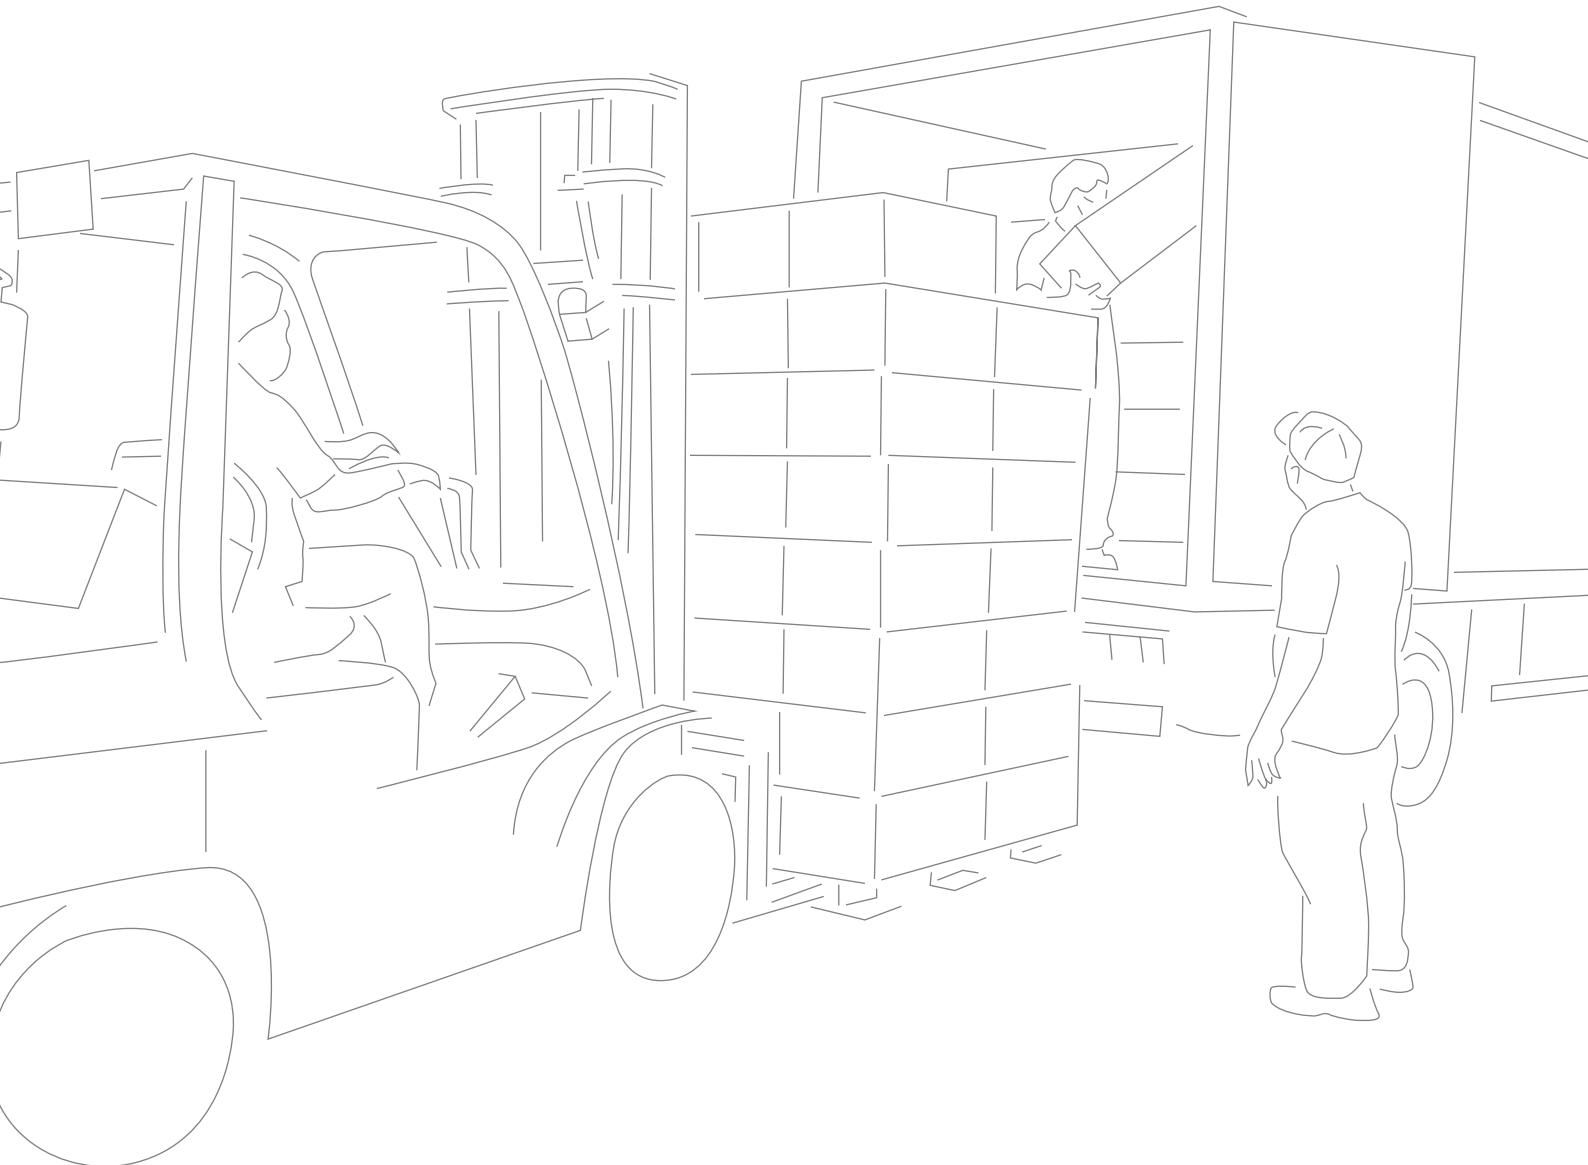

To excel as a leading manufacturer through service, quality and innovation, within a framework dedicated to safety, social and environmental responsibility.

## Commitment

On time delivery with minimum lead time. Dedicated sales network. Entirely customer driven.

## Quality

Concentrated approach to the industry has made K-PAK become the leader with the finest state of the art machinery and modern equipment's.

# Why K-PAK?

UNMATCHED PRODUCT  
QUALITY AND INCOMPARABLE  
DELIVERY TIME WITH NO  
EXTRA CHARGE

# FOAM

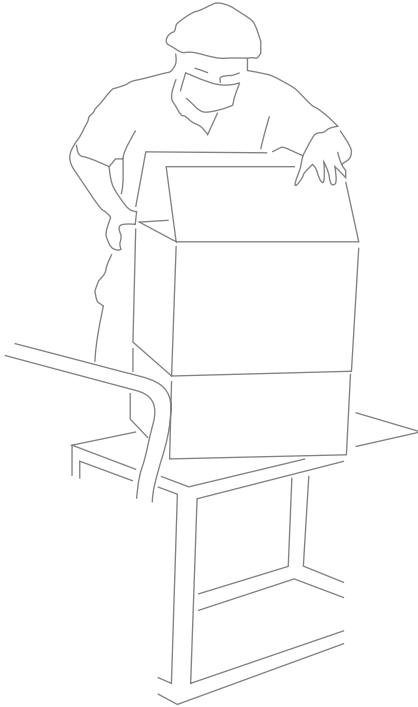

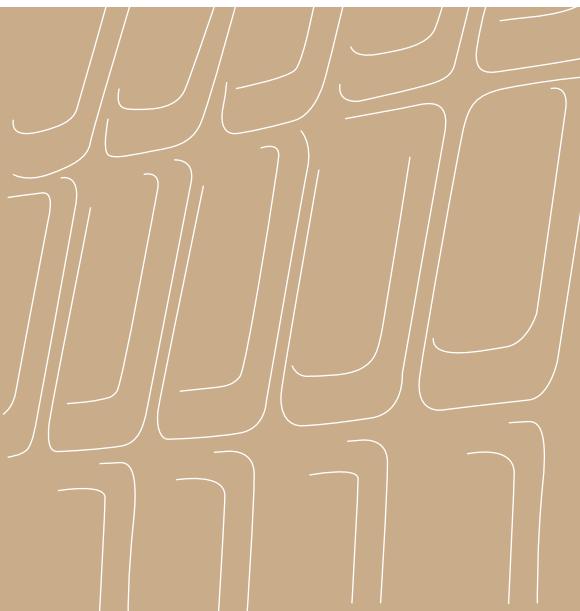

- A popular light material affordable at low price.
- It is the best known insulator.
- Foam is easily and cheaply recycled.
- It is soak-proof.
- It is ideal for hot and cold foods and is used for frozen food packaging.
- It is 100% recyclable, CFC free hence ozone friendly.
- It is hygienic.
- The main users of “foam” food packaging products are:
- Farms (poultry & live stock), Fast- Food restaurants, Supermarkets, Hypermarkets, Catering Companies & Hotels and Cafes etc.

## THE ENVIRONMENT & FOAM, A STRATEGIC ALLIANCE

- 
- A line drawing of a recycling facility. On the left, a conveyor belt system moves materials into a large processing unit. Inside the unit, there are several vertical tanks and pipes. A worker wearing a hard hat and safety vest is standing next to the machine, observing the process.
- Recycling of Foam is very simple and economical.
  - Products with Recycling Mark  can easily be recycled at the plant.
  - Any product having the recycle triangle (PS 6) can be recycled at the plant.
  - Wastes of foam are easier to be compressed underground than rigid plastic products, thus taking less space in land fills.
  - CFC-Free foam products ensure that there are no harmful gases to the environment.
  - Polystyrene is an inevitable by-product of petroleum, thus we are better off utilizing it.

## QUALITY OF PRODUCT

- Quality is a commitment and never sacrificed ensuring the highest quality of products & services. K-PAK Group products are all CFC-free thus Ozone friendly.
- All raw materials used are food grade.
- We provide high quality printing.

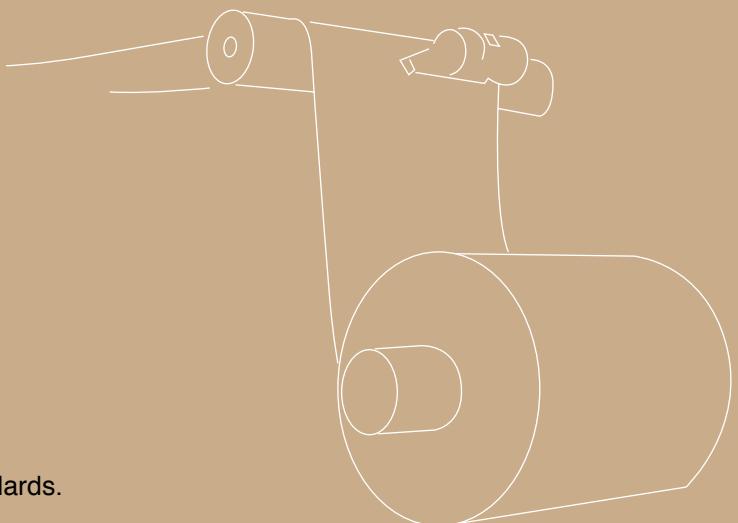

## QUALITY OF SERVICE

- Our delivery time is unmatched and is without extra charges.
- We ensure relationship marketing.
- High moral and excellent industrial business relations.
- We survey customers at random with regards to their satisfaction with our customer support service.
- Having an in-house tool room allows us to customize products to customer's specific requirement.

## K-PAK GROUP PRODUCTION FACILITIES

- Production process: Polystyrene granules - Extrusion - Thermoforming / printing. Most modern technology.
- Strict quality, health, environment and food safety standards.

# VAMPIRELLA, K-STAR ABSORBENT TRAYS

Vampirella is a revolutionary effort by K-PAK to cater to the meat and poultry processing industry.

## VAMPIRELLA TRAYS ARE EQUIPPED WITH

With liquid absorbing properties

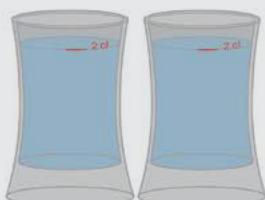

### HIGHLY ABSORBENT SOLVER

Vampirella tray is a highly absorbent poultry tray developed with new technology for the food industry and optimum solutions for individual requirements.

### IMPROVED HYGIENE

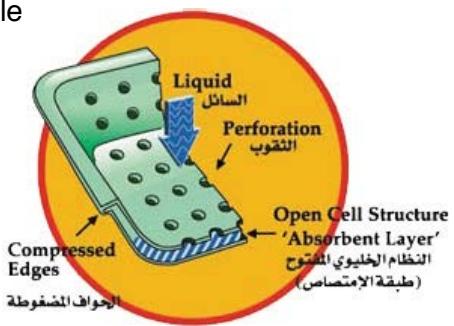

Vampirella products ensure that any kind of liquid is absorbed and packed product gives hygienic and neat look. At the same time the products controls the outgoing pressure and the liquid remains in the absorbent layer.

liquid

## VAMPIRELLA, K-STAR ABSORBENT TRAYS

- Absorbs excess liquid in food packing
- Easy process ability
- Eliminates usage of pads
- Reduces handling of food safety
- Liquid resistance
- No leakage edges
- Retains aesthetics of display shelves
- Retains products presentation
- Absorbs liquid 5-8 times of the tray weight
- 100% recyclable

### INDIVIDUALITY BY COLOR

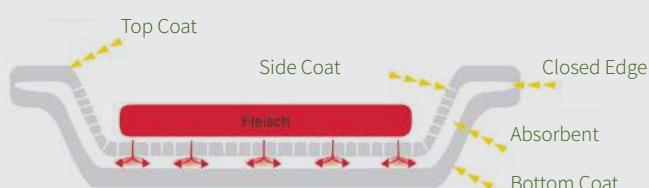

Available in a large color palette Individual choice on the product to be packaged for high recognition value for consumers.

### FULL SURFACE ABSORPTION

Complete fluid intake by full area distributed micro - holes , even in the border area and at an angle frame. Nothing remains visible, nothing seems outwardly through. Vampirella tray is fixed at the edge of the shell closed. Thus, the leakage is prevented. The foil remains clean and presentable.

### CONTEMPORARY PRESENTATIONS

The quality of the packaging product makes it visible. The achieved Vampirella by cautious neutral appearance, accompanied by high functionality and appealing appearance. Fresh meat, fresh fish and poultry present themselves as consumers want it.

# Polystyrene Requires Less Energy To Produce

An average-weight polystyrene foam cold cup requires approximately half as much total energy to produce than a representative-weight wax-coated paperboard cup.

If all polystyrene packaging were replaced with corrugated cardboard, paper, wood, molded fiber etc, compared with current figures, raw material requirements would rise to 560%, power consumption to 215% and the landfill volume to 150%,

**Polystyrene packaging requires less energy than many other material of similar design.**

## EGG BOXES

The egg boxes are available for medium and large eggs and in two versions: One holds 12 eggs retails packs, while the other also holds 12 eggs with added advantage to separate retail pack of 6 eggs with center perforation.

# Cups & Lids

## CUPS & LIDS

EPS molded cups are smartly developed to provide lighter weight and highly insulated packaging to cater the beverage industry. Hot or Cold, the insulation feature enables to retain desired temperature of the beverage for longer duration. Lighter weight, sturdy walls, food safe features, locked with specially developed PS spill-proof, vented or sip through lid, makes it suitable for your take-away beverages.

# Myth vs Reality

## MYTH

Plastics use up non-renewable energy sources and are not energy efficient.

## REALITY

When using plastics in packaging the energy required is less than half of that required for non-plastic packaging. In addition, effective recycling minimizes depletion of our natural resources. At the end of its life the plastic can either be recycled as a material or used as a fuel in the same way as the original fossil fuel that created it.

EPS is a major component of municipal waste and landfills.

EPS accounts for less than one tenth of one percent of the weight of municipal waste.

EPS Cups contain hazardous CFCs that deplete the ozone layer and cause global warming.

EPS contains pentane, not CFCs, which is broken down naturally and rapidly in the atmosphere. Pentane is not a recognized greenhouse gas and so use of EPS cups does not contribute to global warming or depletion of the ozone layer.

EPS cups taste and smell like chemicals.

The base material for EPS is polystyrene which has neither taste nor odor. EPS cups consist of approximately 5% polystyrene and 95% air.

EPS Cups have inferior strength which leads to spillage.

EPS cups have a very high strength to weight ratio and have the highest stiffness compared to other disposable containers. This reduces drink spillage while improving comfort and safety for the customer.

# EPS Cups are Energy Efficient

EPS Cups emerge as the most energy efficient when compared to all different kinds of drinking cups. For example, disposable paper cups require 2.75 times more energy throughout their lives than EPS foam cups (the difference between the two green horizontal lines in the graph below).

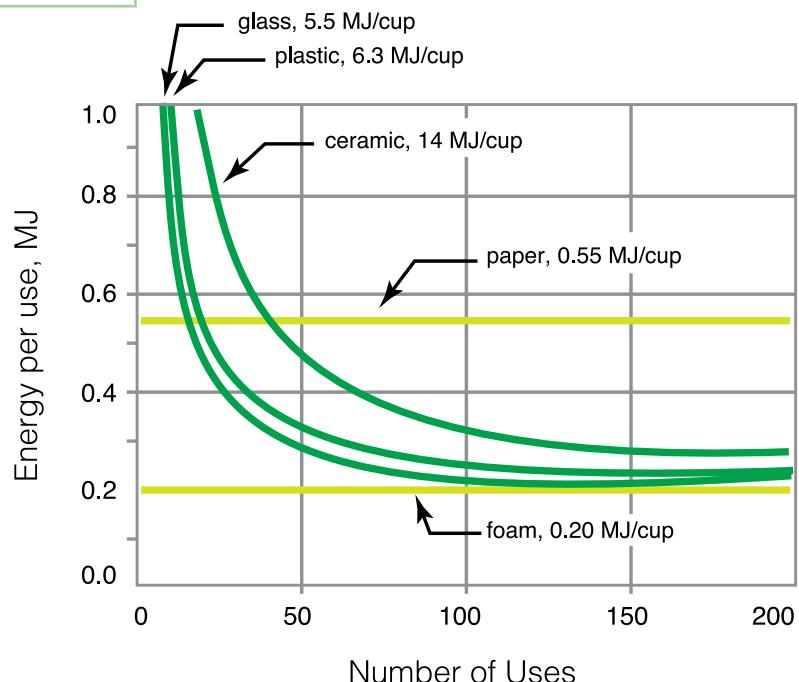

## Did you know Paper Cup is a plastic Cup?

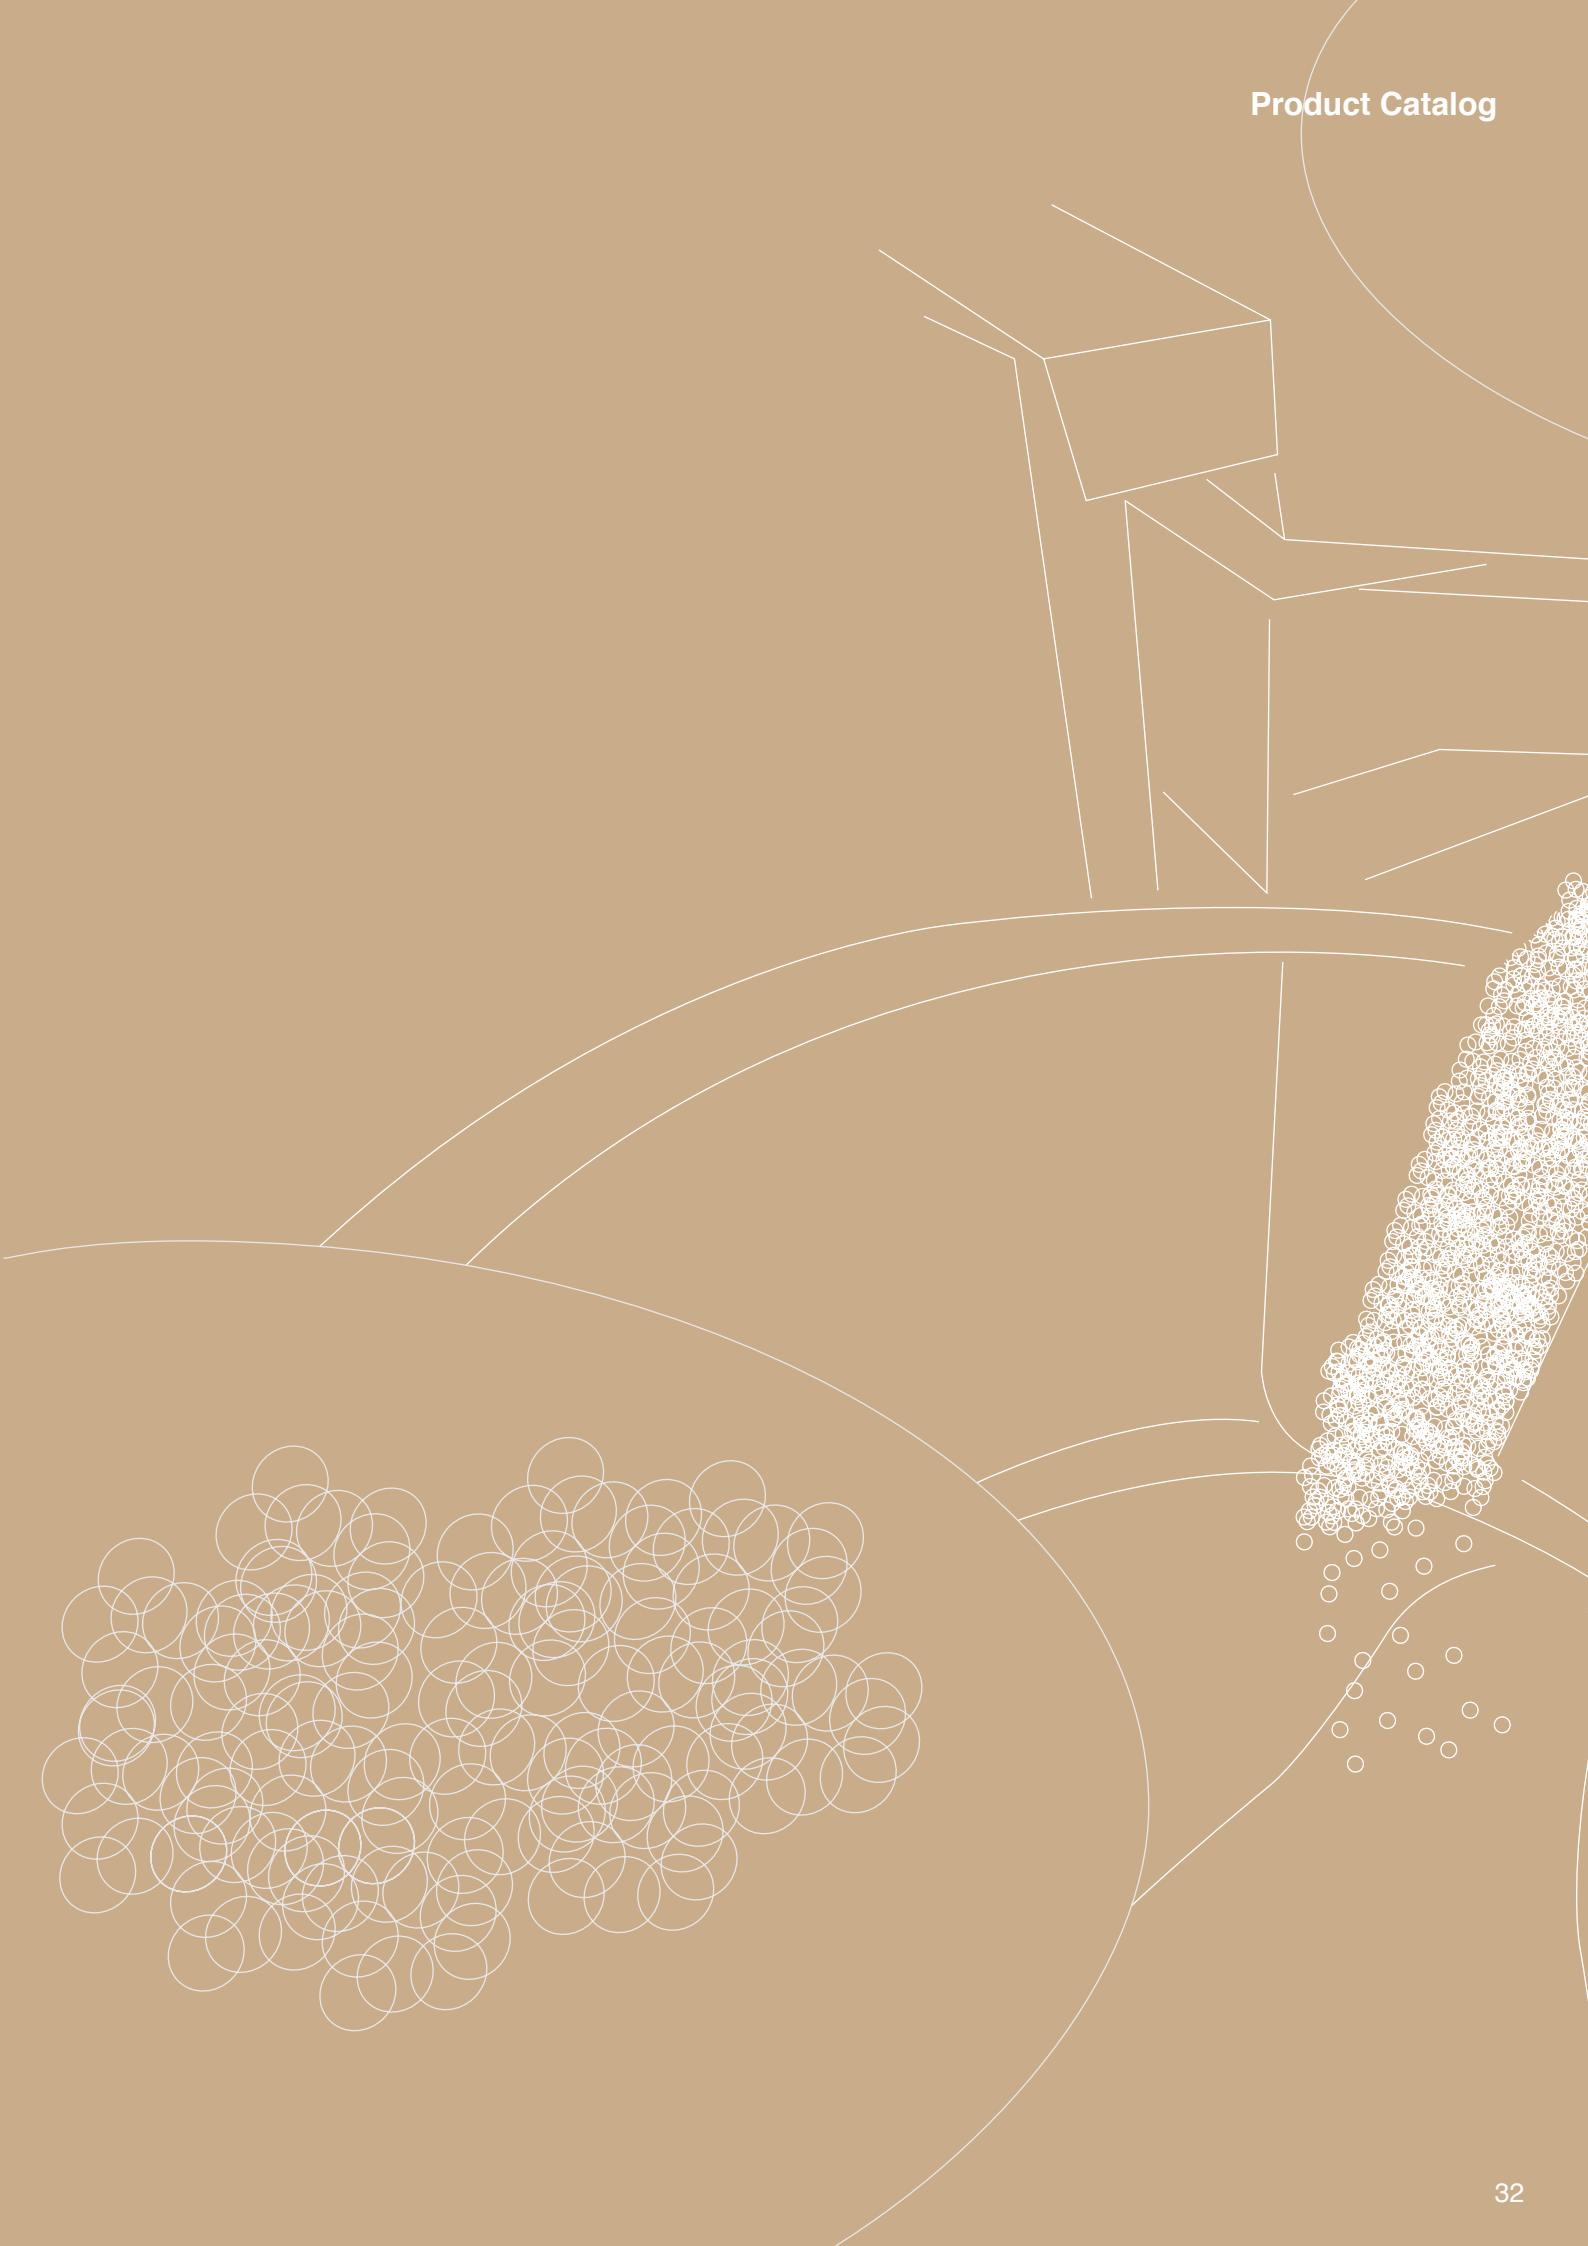

The reusable alternatives, ceramic, glass and plastic cups, use more energy during their production, in addition to the energy required to clean them in between uses, as they are used more often, the “energy per use” reduces (shown by the blue downward sloping lines in the graph). A ceramic cup needs to be used more than 1000 times before it reaches the equivalent “energy per use” level of an EPS foam cup.

Reusable Cup	Disposable Cup	
	Paper	Foam
Ceramic	1006	39
Plastic	450	17
Glass	393	15

**Table 1** - shows the number of uses necessary before reusable cup listed on the left becomes equally energy efficient to the disposable cup listed on the top

**Figure 1** - The energy per use of each reusable cup (green lines) declines the more it is used

## PET RANGE

- Tough and rigid – exceptional strength
- Resistance to water and oxygen
- Presentable PET clarity enhances product visibility
- Easy to open and close for customer convenience

# EPS Cups & the Environment

## What is Expandable Polystyrene?

Commonly known as EPS, expandable polystyrene is a rigid, lightweight, foamed plastic product with excellent thermal insulation and impact resistant properties. EPS is produced when pentane, dissolved in small polystyrene beads, is made to expand

under the influence of heat and steam. These foamed beads can be moulded into a wide range of shapes and sizes suitable for a wealth of application in packaging, insulation and disposable cups.

- EPS is recyclable
- EPS does not deplete the ozone layer
- EPS contains no CFCs, HFCs or HCFC5s
- EPS represents an efficient use of the world's resources
- Food/drink stays fresher and longer resulting in less food spoilage
- EPS cups are more energy efficient than ceramic & paper cups

## System Solution From One Source

“We live packaging and closely cooperate with our customers on all levels of product development. This is how the best solutions develop.”

# OUR CUSTOM PACKAGING PROCESS

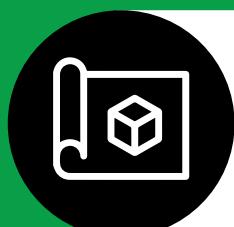

## NEEDS ASSESSMENT

Our sales representative will work with you to capture your unique needs, including a walk-through of the product journey & desired consumer experience.

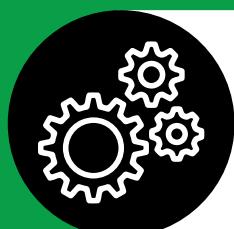

## DESIGN, DRAWINGS & QUOTE

Our dedicated design team collaborates with you to provide designs that meet the identified aesthetic & functional goals for your package.

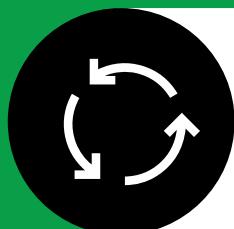

## PROTOTYPING

Once the drawing is approved, we move to prototyping. You will receive a physical prototype to evaluate and approve form, fit, & function of the final product.

## TOOLING & MANUFACTURING

Once the prototype is approved, we craft custom tooling in our in-house tool room. Then, we manufacture the package on one of our manufacturing lines.

## CONTINUED SUPPORT

Our job doesn't stop after the first production run. Our customer support team exists to meet your ongoing needs, including supply management, shipping & more.
